

## MOTOR CASING THICKNESS CALCULATION

Considering design pressure:

$$P_D = \frac{2tF_{ty}}{D_0S_D} \dots\dots\dots (1)$$

Where:  $F_{ty}$ - Yield strength.

$P_D$  – Design Pressure

t – Thickness

$D_0$  - Outer diameter

$S_D$  - Safety factor

From equation (1)

$$t = \frac{P_D D_0 S_D}{2F_{ty}}$$

For:

$$P_D = 8.02 \text{ Mpa}$$

$$D_0 = 73 \text{ mm}$$

$$S_D = 1.87$$

$$F_{ty} = 220 \text{ MPa}$$

$$t = \frac{8.02 \times 73 \times 1.87}{2 \times 220}$$

$$t = 2.5 \text{ mm}$$

Thus:

$$D_{outer} = 73 \text{ mm}$$

$$D_{inner} = 68 \text{ mm}$$

$$t = 2.5 \text{ mm}$$

For:

$$t = 2.5\text{mm}$$

$$D_o = 73\text{mm}$$

$$B = 1.726$$

$$F_{ty} = 220\text{MPa}$$

$$P_V = \frac{2 \times 2.5 \times 220 \times 1.726}{73}$$

$$= 26.0082\text{MPa}$$

$$= 26\text{MPa}$$

### Design and Burst Pressures for Rocket Motor Casing

*[Input data in blue text. English or (SI) units]*

#### Casing Dimensions and Design Factors

$D_o =$	<b>2.874</b>	in. (mm)	Diameter, outside
$t =$	<b>0.098</b>	in. (mm)	Wall thickness
$S_D =$	<b>1.87</b>		Design Safety factor

#### Material Properties

$F_{ty} =$	<b>35</b>	ksi (MPa)	Yield Strength
$F_{tu} =$	<b>58</b>	ksi (MPa)	Ultimate Strength
$E =$	<b>29</b>	Msi (MPa)	Modulus of Elasticity
$\nu =$	<b>0.29</b>		Poisson Ratio
$\beta =$	0.603		$F_{ty}/F_{tu}$
$B =$	1.726		Burst factor

#### Design and Burst Pressures

$P_D =$	<b>1282</b>	psi (kPa)	<b>Design pressure</b>
$P_U =$	<b>4137</b>	psi (kPa)	<b>Burst pressure</b>
$S_U =$	<b>3.23</b>		<b>Burst Safety Factor</b>
